

Technical Datasheet

Confetti Mini Hose Blower

Specifications:

Length: 48cm

Height: 24cm

Width: 22cm

Weight: 13kg

Shipping Length: 75cm

Shipping Height: 56cm

Shipping Width: 66cm

Noise: 97db

Power connector:
Powercon

Voltage: 240V

Wattage: 1150w

Suggested for set up:
1 persons

Duration of effect:
Dependent on confetti
volume

The Confetti Mini Hose Blower is a compact but effective electrically-powered indoor confetti machine capable of firing a continuous stream of confetti up to 7mtrs. The Blower does not require any gas to propel the confetti so the effect will last as long as the supply of confetti does.

How to set up and use a Confetti Mini Hose Blower.

1. Screw the barrel into the front of the blower (fig 3).
2. Twist-lock the flexible hose into the top inlet.
3. Position the machine as required. Use the stand to angle the unit. Secure the stand by tightening both screw handles (fig 4).
4. Connect the unit to a power supply and switch on the machine (fig 5).
5. Use the hose to suck up loose confetti from a box or other container (fig 6). The compartment in the flightcase that the machines ships in that hold the hose section is an ideal contained for the confetti.
6. The blower will fire the confetti out of the front barrel.

Safety / Hints & Tips

- Ensure a safety distance of approximately 3 metres away from audiences.
- This machine is suitable for tissue paper or metallic confetti but **not** streamers.
- Ensure the machine has an operator holding the hose at all times when in use. Do not leave it unattended.
- Do not attempt to control the unit via DMX or other remote system.
- 2 machines can be daisy chained together to run from one power supply. Do not daisy chain more than 2 units.
- The machine will consume approx 1kg of confetti per minute.
