

Technical Datasheet

Flying Pic Maker

The Flying Pic Maker creates floating bubble 'clouds' in a range of different shapes. Using a combination of specially formulated bubble solution and helium gas the MTFX Flying Pic Maker offers a unique and fun way of sending your logos and images out into the world.

Fig 1. The Flying Pic Maker

Using the Flying Pic Maker MTFX can create your chosen logo and images in lighter-than-air bubbles which will float away over your event and disappear naturally without trace.

Fig 2. Gas inlet

The Flying Pic Maker system is perfect for outdoor events, parties, weddings and branded product launches.

Bubble logos can be made up to 40cm wide, and we can create infinite numbers and combinations of images for you.

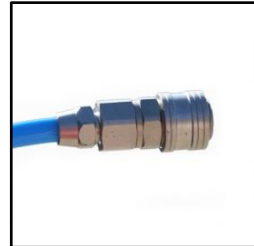

Fig 3. Gas line

Images will float up to around 150mtrs and will not cause issues with aircraft. The machines use a mix of oxygen and helium to create the images and the bubble fluid used is also non-hazardous to humans, animals and plant life.

Fig 4. A shape being formed

The Flying Pic Maker is currently unavailable for dry-hire.

It can either be hired along with an MTFX Technician to operate it or permanently installed at your venue. Please contact us for prices and further info.

Specifications:

Height: 60cm

Width: 39cm

Depth: 39cm

Weight: 22kg

Suggested for set up:
1 person

Duration of effect:
Dependent on fluid and
gas supplies

Additional requirements:
Bubble solution
Helium
