Grated Ice Effect

MTFX's Grated Ice Effect is a fantastic effect that's easy to create and doesn't melt.

One 50ml pot makes approximately 1.25 litres of thick ice which can be diluted to requirement.

How to use MTFX's Grated Ice Effect

1. Twist the lid off of the tub, and remove the safety cap underneath the lid.
2. Thick ice is produced at a 1 parts Grated Ice to 25 parts water. You can then dilute to requirement. Pour in desired ice, then add water accordingly.
3. Wait approx. 15 minutes for the solution to form.
4. The ice will expand with the water.
5. Place the now gel like realistic ice anywhere you wish the effect to be present.
6. To clean up, pour the effect into a disposable bag and place into general waste.
