

A quiet stand-alone silk flame unit that provides a fire effect when real fire is not a suitable option. Flames can be up to 6m.

### How to set up and test a large silk flame machine

1. Take the silk out of the flight case and carefully unwrap the silk material. Avoid letting the silk touch the floor as it will become dirty very quickly. If there are any marks on the silk please contact MTFX immediately.
2. Plug in the unit and turn on the lamps.
3. Turn on the fan controller and set to the required speed. Different speeds will give different effects.
4. Swivel the lamps to produce different effects on the silk
5. When the unit is turned off, make sure the lights are turned off first, then the fan, as the silk can be burned if it lands on hot working lights. Support the silk as the fan is turned off so that it does not drop to the floor.

### Hints and tips

- Ensure the silk does not drop outside of the flight case as it may get caught in the fan inlet when the fan is running.
- Silk flames that are returned from hire damaged or dirtied will be surcharged in addition to the hiring fee.
- This type of effect is not suitable for use in wind or rain.

### Specifications:

Size: 75 x 72 x 72cm

Shipping size:

75 x 72 x 76cm

Equipment weight: 49kg

Shipping weight: 56kg

Voltage: 220-240V

Power connector:

16A plug

Peak amps drawn: 8.5

Decibels: 68db at 6m

Amps drawn running:

4.8

Water supply: N/A

Air connector: N/A

HV colour: N/A

Additional requirements:

N/A

Suggested for set up:

1 person

Duration of effect:

Can be run for any

length of time
