

Technical Datasheet

Pirate Cannon

Specifications:

Height: 104cm

Width: 61cm

Length: 230cm

Weight: 25kg approx

Suggested for set up:
2 persons

Additional information:

- Not for dry-hire
- Fragile
- Wheels are non-directional
- 6.5cm internal hole for CO2 hose
- CO2 jet / controller not included as standard

MTFX's artificial pirate cannon is designed to be rigged with a CO2 jet to create the effect of the cannon having just been fired. This effect is particularly realistic when used with sound and movement to simulate it being fired. This unit will not fire any projectiles so is safe and ideal for use on stage and TV.

The barrel opening at the front is 24.5cm and the back of the barrel features a removable cover to allow rigging of a CO2 jet and hose.

The cannon must not be lifted by the front end of the barrel as the weight at the back end will cause the barrel to break.

The Pirate Cannon is currently unavailable for dry-hire and can only be hired along with an MTFX Technician to operate it. Please contact us for prices and further info.
