

Technical Datasheet

Large Snow Flocking Machine

Specifications:

Equipment Size:
89Hx 47W x 49L cm

Equipment Weight: 37
kg

Shipping Type:
Pallet

Shipping Size:
Pallet

Shipping Weight:
Pallet

Power connector:
16A to IEC

Peak Amps: 4.9

Additional
Requirements: Snow
Flock Fire Retardant
11kg bag or Paper
Snow Standard 10kg

Suggested for setup:
1 person

Flocking creates a beautiful snowy effect that is perfect for all manner of winter effects and can be used on a variety of objects to create a realistic snow effect.

How to set up and use the Snow Flocking Machine

1. Prepare area/item/tree that you wish to flock
2. Obtain appropriate protective equipment
3. Attach water hose to flocking nozzle (fig 8 & 9.)
4. Attach material hose to machine outlet (fig 4 & 10.)
5. Attach other end of hose to flocking nozzle (fig 8 & 10.)
6. Attach remote cord from flocking nozzle to the flocking unit. Insert and turn clockwise.(fig 5 & 8.)
7. Connect 16A power cable and connect to power socket (fig 5.)
8. Open material flow gate to desired setting by moving lever on side of unit (fig 5.)
9. Set blower flow adjustment to desired setting by moving lever located on the side of unit (fig 5.)
10. Begin filling bucket with paper snow bond.
- 11. Ensure the lid is firmly on when flocking. Machine will automatically cut out if removed.**
12. Place the on/off switch in the "ON" position (fig 5.)
13. Open water valve and spray tree or object with water only. This will help create a stronger bond.
14. When ready to flock with snow, move the on/off switch located on the under barrel of the flocking nozzle in to the "on" position.
15. Once tree/object has been sprayed with snow, spray once again with water only.

Safety, Hints & Tips

- Do not use in the rain.
- Maximum bucket load is 10kg of artificial snow.
