

Technical Datasheet

Simulation Cigarette Prop

Specifications:

Equipment Size:

825 x 80 mm

Equipment Weight: 20g

Shipping Type:

MTFX Operator

Available Colours: Tan
or White

Battery operated &
Chargeable

The Artificial Cigarette is a realistic effect system designed for the TV, Film and Stage industry. For use when a safe, unarmful effect is required and/or a real lit cigarette is not permitted.

The artificial cigarette generates a safe non-toxic vapor that allows the realistic action of smoking without any exposure to actual smoke, carcinogens, nicotine or smell.

Unlike other artificial cigarettes, this model emits not only realistic smoke whilst breathing in and out, but also produces smoke from the end of the cigarette, achieving the exact same effect as a real cigarette.

As a Technician required effect, MTFX will provide and assist in the operation of the cigarette prop to ensure the maximum effect is achieved.
